Hardy Perennials

Landscape Service

OUR AIM, AMBITION AND OBJECT

We are here to serve you in helping to develop the resources and beauties of Talbot County and the Eastern Shore.

The plants listed in this booklet are especially adapted for this locality, its soils and climate.

OUR ORGANIZATION AND EQUIPMENT

Our practical knowledge and long experience is our chief asset backed up by the youthful energy and enterprise of university graduates in Landscape Architecture and Floriculture, with a special knowledge of plant life on the Eastern Shore.

LOCATION

Situated about 2 miles out of Easton on the Dover Road Route 213, the main road between Easton, Salisbury and Cambridge.

DELIVERY

Delivery free within a radius of 10 miles of the nursery.

We shall be glad to consult with you about your garden and landscape problems.

We also have engineering connections with whom we work in co-operation, experienced in Road Building, Drainage, Sea Wall protection, etc.

GUARANTEE

We will replace any plant that does not commence to grow when supplied and planted by us.

Plants purchased from us and planted by the customer will be replaced at half-price, should failure ensue.

All terms, prices, conditions, etc. are subject to change wherein they conflict with the Nurserymen's Code under the N. R. A.

The American Holly

Would you be interested in a holly hedge on your estate? It is hardly necessary to say what a beautiful picture it would be if properly located.

It has always been a mystery to us who are quite familiar with what the English have done with the holly in their gardens, why the American Holly has not come into its own in this country.

Just because it is rather difficult to transport from the woods is no proof that the Holly when nursery grown is not easily transplanted and a vigorous grower.

We do not wish to sell you a holly hedge without it would be a success.

In approved positions and planted by us or under our supervision we guarantee success.

We should be glad to call and talk over the subject with you.

Hedges

Holly for hedge purposes, 18 to 24 in., \$50.00 per 100.

HARDY WATER LILIES

There is nothing more fascinating than Water Lilies in the garden. The smaller the garden the more desirable is the delightful feature of a pool even if it only be a half barrel sunk in the ground.

It will be a spot of daily interest.

Quantity prices subject to the NRA Code.

The needs of the Water Lilies are the same whether they are grown in a tub sunk in the ground, a concrete pool or a natural pond. Full sunshine, rich soil and warm shallow water.

Of course there are all kinds of Water Lilies. Tropical Water Lilies, both day and night blooming, that need special built tanks in greenhouses to keep them alive in the winter.

We, however, confine ourselves exclusively to those kinds that are hardy and that will grow as the wild pond Lilies.

Their colors range through all the reds and pinks, beautiful combinations of yellow, buff, orange and those glorious white ones that look as if they are carved out of wax.

It is most difficult to describe the colors for it is really the changing combinations which add so much to their charm.

From the time the lily pads or leaves come up out of the mud and float on the surface of the pool there is a constant change. Leaf after leaf develops until the plant gets strong enough, then will come a bud, which daily gets larger until it lifts itself well out of the water expanding in the early morning, closing about midday, opening again the following morning.

WATER LILIES

ATTRACTION:—A brief description is, garnet with tips of petals shaded a light rose. In rich soil the flowers lift themselves well out of the water and measure 8 inches across ----- \$2.50

CHROMATELLA:—The best yellow water lily -- \$1.50

GLADSTONE:—The queen of white Water Lilies. Dazzling white large and strong grower, 6 to 8 inches across ----- \$1.50

HOPATCONG:—An exquisite small white ----- \$1.00

INDIANA:—A vivid combination of shades of copper, and wine color. ----- \$1.50

JAMES BRYDON:—This variety was the general favorite of the many visitors to our Lily Ponds. The color is a rich rosy crimson, beautifully shaped, large flowers and rich foliage. ----- \$3.00

ROSE MAGNOLIA:—Most delightful delicate pink, the flowers stand well out of the water and a very free grower. ----- \$1.00

PINK OPAL:—Rich pink, vigorous grower and produces an enormous quantity of flowers. A splendid kind for naturalizing in ponds. ----- \$1.00

ROSE AREY:—Deep cerise pink, very delicate and lovely ----- \$1.00

SIOUX:—The general effect is copper colored but the color constantly changes to all shades of apricot. An exquisite variety ----- \$2.00

NELUMBO NUCIFERA, The Japanese Sacred Lotus:—The large round leaves stand 2 to 3 feet out of the water the flowers stalks above them. Blooms over a period of two months, the individual flowers lasting 2 to 3 days. The pointed flower buds get larger and larger until they open into a flower that reminds one of a gigantic peony of exquisite rose pink color and form. To grow it to perfection it requires deep rich mud and plenty of room so that if grown in a tub, the tub should be at least 3 feet across and 18 inches deep. ----- \$5.00

NELUMBO LUTEA, The American Lotus:—Very much like the Japanese Lotus, but with large pale, lemon yellow flowers, equally as beautiful as the pink. \$5.00

HOW TO PLANT WATER LILIES

The plant you get is a tuber with one or more growing points. This should be planted or anchored in the mud where the water is not more than 6 or 8 inches deep.

If they are to be grown in a concrete pool plant in boxes or tubs not more than 12 inches deep and sink to the proper depth so that the surface of the soil will not be more than 8 inches under water.

PLANNING BEFORE PLANTING

Too frequently the home owner without sufficient funds to completely design his grounds wastes a good deal of money buying the wrong plant for a given location. The better way to do is locate all walks, drives, and service and pleasure areas first and then plan the arrangement and style of planting before planting a single plant. Then with a budget, the proper plant can be bought each time an expenditure is made and the goal toward which you are striving will be attained. Come to us, we can save you money and help give you the picture you wish to produce.
